Dr. Courenin's theory of consumption is, that is owing to an undue waste or an insufficient supply of phosphorus in the system. To supply this want he administers the hypophosphates of lime and soda, in doses the hypophosphates of lime and soda, in doses of from five to twenty grains daily, in a small quantity of sweetened water. In a paper read by him before the Academy of Medicine at Paris, he gave an account of forty-one cases treated in this way with success. He insists that the cure of consumption in the second and third stages, (at a period, consequently, when there can be no uncertainty as to the nature of the discuse,) can be obtained in all cases by this treatment excent when the existing lesion of treatment, except when the existing lesion of the lungs is of itself sufficient to produce death. He also says that these substances have not only a curative effect, but will, if used wherever stantinople. In consequence of Dr. Churchill's discovery, the manufacture of the hypophos-phates in Paris has already attained a considerable degree of importance, whereas before they were applied to no use, and were only to be found as chemical specimens in the laboratory. -Springfield Republican.
